CASE MATERIALS

Backgrounds

Nexora is one of the largest e-commerce marketplaces in Southeast Asia, with Indonesia as its largest market. Its open platform allows anyone to buy and sell: buyers come from the general public, while sellers range from newly established micro, small, and medium enterprises (MSMEs) to established brands. Given Indonesia's strategic importance to Nexora's regional operations, the Indonesian e-commerce market serves as the primary focus of this case.

Behind every order sits a logistics network. Nexora operates NexExpress, its own delivery service, which collects parcels from sellers and delivers them to buyers. Alongside seller commissions and service fees, logistics is part of how Nexora earns revenue and shapes the customer experience.

For years, Nexora fueled its growth through heavy subsidies. Constant discount vouchers, free-shipping promotions, and flash sales kept buyers engaged and sellers active, with the company absorbing the cost. Most of these deliveries were handled by third-party couriers. While the market rewarded rapid user acquisition and Gross Merchandise Value (GMV) growth, this capital-intensive approach was widely accepted.

From 2025, that environment has changed. Investors no longer look only at growth; they expect a clear path to sustainable profitability. E-commerce platforms face increasing pressure to balance growth with profitability and operational efficiency. In response, Nexora has gradually raised seller commission fees, scaled back general promotions, and moved a larger share of deliveries to NexExpress.

This transition is not easy, as Nexora competes with several strong players. Scrolla offers content-driven social commerce, while Avori and Borong.id remain established rivals in the Indonesian e-commerce market. Consumers are highly price-sensitive, and logistics costs continue to rise. Nexora must therefore pursue sustainable profitability while maintaining its competitive position and preventing sellers and buyers from switching to competing platforms.

Geographical Scope: Unless explicitly stated otherwise, all company performance indicators, competitor comparisons, market growth figures, and market shares presented in this case refer to the Indonesian e-commerce marketplace market for the specified reporting periods. Nexora's broader Southeast Asian operations provide strategic context, but Indonesia is the primary market for analysis. All monetary figures are expressed in Indonesian Rupiah (IDR).

Current Operational Status

Nexora has achieved profitability, but the operational changes required to attain it have placed added pressure on both sellers and buyers.

TRANSITION TO PROFITABILITY

- Seller commissions have increased incrementally to approximately 8%–20%+, varying by product category, supplemented by additional service fees
- Fulfillment is increasingly routed through NexExpress, reducing average delivery costs per package
- Platform-wide discount vouchers and general promotional subsidies have been scaled back

COMPETITIVE LANDSCAPE

- Scrolla effectively integrates social entertainment with direct e-commerce purchasing
- Borong.id serves as a viable alternative for users seeking lower fee structures

STAKEHOLDER PRESSURES

- Higher commission fees disproportionately impact smaller, lower-margin merchants
- Price-sensitive consumers experience reduced access to platform-wide shipping and purchase subsidies
- Industry-wide logistics costs continue an upward trend

CORE BUSINESS OBJECTIVES

- Sustain long-term operational profitability and margin growth
- Maintain market leadership as Southeast Asia's primary e-commerce platform
- Ensure high service quality, reliability, and delivery speed across logistics network

Initial Feedback

> *The market has accepted our earlier increase. Another step is the fastest way to keep profit growing.*

-Commercial Director

> *Every parcel we move in-house costs less than a third-party courier. Owning delivery is our long-term advantage.*

-Logistics Director

> *Small sellers are leaving first. If we lose them, we lose the variety that brings buyers here.*

-Seller Success Director

> *Whichever option we choose needs data and automation behind it. We cannot run it by hand at this scale.*

-Technology Director

Operational Matrix

Key Performance Indicator	2024	2025
Gross Merchandise Value (GMV)	IDR 560 trillion	IDR 600 trillion
Platform Revenue	IDR 45 trillion	IDR 60 trillion
Take Rate (Revenue / GMV)	8%	10%
Marketing Expense	IDR 28 trillion	IDR 24 trillion
Delivery Cost per Parcel	IDR 12,000	IDR 10,000
Operating Profit (Loss)	(IDR 3 trillion loss)	IDR 5 trillion profit
Annual Small Seller Churn Rate	7%	12%

Competitor and Market Share Performance

Competitor comparison, 2025

Indicator	Nexora	Scrolla	Avori	Borong.id
GMV	IDR 600 trillion	IDR 330 trillion	IDR 180 trillion	IDR 90 trillion
GMV growth from 2024	7%	32%	3%	6%
Take rate	10%	6%	8%	7%
General free shipping	No, targeted incentives only	Yes	Limited	Yes, with minimum spend
Delivery cost per parcel	IDR 10,000	IDR 12,500	IDR 11,000	IDR 11,500

Competitor and Market Share Performance

Indonesian e-commerce market growth and value share

Value	2023	2024	2025
Market growth	9%	14%	11%
Nexora value share	50%	48%	46%
Scrolla value share	14%	21%	25%
Avori value share	20%	15%	14%
Borong.id value share	8%	7%	7%
Other players	8%	9%	8%

** Value share is each platform's GMV as a share of the total market GMV for the 12-month period.*

Seller Performance & Operational

Perfomance by Seller Segment 2025

Seller segment	GMV (IDR Tn)	Revenue (IDR Tn)	Annual churn
Small sellers (MSME)	200	20	12%
Mid-size sellers	220	22	5%
Other Segments	180	18	2%
Total	600	60	

Additional Operating Data

Additional Operating Data	Value
Annual parcels delivered (2025)	2 billion parcels
Parcels handled by NexExpress (2025)	50%
Average cost per NexExpress parcel	IDR 8,000
Average cost per third-party courier parcel	IDR 12,000
Small sellers active at the beginning of 2025	1.2 million
Repeat-buyer rate (2024 → 2025)	62% → 57%

Problem Statement

CORE QUESTION

How can Nexora achieve sustainable profitable growth while strengthening its competitive position and mitigating seller and buyer attrition in Indonesia's increasingly competitive e-commerce market?

Participants are required to:

- Identify and prioritize Nexora's fundamental business challenges based on the case data.
- Develop a differentiated strategic recommendation that addresses the identified root causes.
- Position digital innovation as a core enabler of the proposed strategy.
- Evaluate the expected business impact, financial implications, and operational feasibility of the recommendation.
- Support their analysis with credible external evidence, transparent assumptions, and rigorous business reasoning.

Constraint

Participants must address the following key constraints:

- ✓ Profit growth must remain positive and sustainable
- ✓ Digital technology and innovation must form the core driver of the strategy
- ✓ Additional assumptions must be realistic, clearly articulated, and consistent with case facts
- ✓ External references beyond provided case materials are permitted

PRELIMINARY INFORMATION

Rules and Submission Requirements

Parameter	Specification
Paper Size	A4
Font	Times New Roman, 12 pt
Line Spacing	Single
Paragraph Alignment	Justified
Margin	2.54 cm (Top, Left, Bottom, Right)
Maximum Length	3 pages, excluding Cover, References and Appendix
Reference Syle	APA Style
IBSC Logo	Must be included in the document
File Format	PDF
File Name	Preliminary_Team Name_IBSC2026
Maximum File Size	30 MB

SUBMISSION

Submit Executive Summary and Statement of Originality through official IBSC 2026 Google Form no longer than 1 November 2026, 11:59 PM (GMT+7)

https://bit.ly/Preliminary-SubmissionIBSC2026

LATE SUBMISSION PENALTY

Participants are granted a 5-minute grace period after the official submission deadline. After the grace period, a penalty of 1 point per minute of delay will be applied to the submission score. Submissions received more than 3 hours after the official deadline will not be accepted and will be disqualified from evaluation.

Judging Criteria

PROBLEM ANALYSIS

Evaluates the participant's ability to systematically break down complex business problems into logically structured and relevant sub-components, to uncover their fundamental root causes, and their level of impact and urgency.

20%

IMPACT AND FEASIBILITY

Evaluates the participant's solution based on their impact on users and the business supported by arguments that are strong, realistic, measurable, and relevant to the case, as well as their feasibility for implementation, accompanied by a convincing explanation regarding the feasibility under real constraints.

30%

STRATEGIC SOLUTION

Evaluates the participant's ability to propose innovative, differentiated solutions that moves beyond generic standard approaches and logically aligns with the identified root causes.

30%

ESSAY STRUCTURE

Alignment of the essay with the structure and specifications required by the guidebook, as well as the neatness of the work.

5%

QUALITY OF DATA + EVIDENCE

Evaluates the participants's use of data and its relevance with everything they have included, as well as arguments regarding their objectivity.

15%

FINALITY OF JUDGING DECISIONS

All judging decisions and scores are final and binding. Participants may not dispute, appeal, or request a reassessment of the judges' decisions. The judges' evaluations shall be conducted in accordance with the established judging criteria.

GLOSSARY

Glossary

Term	Definition / Explanation
MSMEs	Micro, Small, and Medium Enterprises
GMV (Gross Merchandise Value)	The total dollar value of merchandise sold through the platform over a given timeframe, calculated prior to deductions for fees, returns, or discounts. GMV does not represent platform revenue.
Take rate	The percentage of total transaction volume retained by the platform as revenue, primarily derived from commission fees and service charges.
EBITDA	Earnings Before Interest, Taxes, Depreciation, and Amortization; a measure of core operational profitability.
Churn rate (seller churn)	The percentage rate at which users or merchants discontinue using the platform service within a specified period.
Last-mile delivery	The final step of the supply chain delivering goods from a transportation hub to the final end-user destination, often representing the most complex and costly phase of logistics.
